                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  용
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
       A new method to regulate muscle growth

3) isclosure; Page 121-121; 130pp; English.

2) The present sequence is human Desert hedgehog protein Dhh. The Invention relates to a method for modulating the formation and/or maintenance of muscle tissue by ecotopically contacting muscle cells, especially muscle stem/progenitor cells, in vitro or in least the engage of the repetit (i.e. hedgehog polypeptides and gene therapy constructs) or ptc therapeutic (i.e. a small organic molecule that mimics the effect of hedgehog proteins on patched signalling, or activates or potentiates patched signalling) in an amount effective to alter the growth state of the treated cells. Also claimed is a method for treatment or prevention of disorders of, or surgical or cosmetic repair of, such muscle tissues, by administering a hedgehog polypeptide or ptc therapeutic. The disorder may be muscle atrophy, in particular skeletal muscle atrophy or cardiac muscle atrophy, cachexia, or muscular myopathy atrophy or cardiac muscle atrophy, cachexia, or muscular myopathy atrophy or cardiac muscle atrophy, cachexia, or muscular myopathy atrophy or cardiac muscle atrophy, cachexia, or muscular myopathy atrophy or cardiac on colaimed). The hedgehog therapeutic can hyperblastic or neoplastic growth of muscle tissue such as in myopathy comprises at least a bloactive extracellular portion of a hedgehog protein (see v05510-19) encoded by a vertebrate hedgehog gene (see x25098-107), especially a human hedgehog gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                  74-MAR-1999; U17922.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
This is the amino acid sequence of a precursor of a novel human Desert hedgehog protein, as deduced from a CDNA clone (see V62395) derived from cell line ARH-77 (ATCC CRL-1621). The mature form (see W79593) of the hedgehog protein is also claimed, as are a monoclonal antibody (MAb) that recognises the protein, a process for producing the protein, and a method for detecting the protein. The hedgehog protein is useful in establishment of hybriddomas which produce antibodies recognising the protein, and the MAb is useful for detecting and purifying the protein. The hedgehog protein burseful in establishment of hybriddomas which produce antibodies recognising the protein. The hedgehog protein burseful in establishment of hybriddomas which produce and mab can be used to elucidate hereditary morphological abnormalities in humans to establish their treatments and diagnoses. Sequence 396 AA;

The sequence represents a mouse Indian hedgehog protein, homologout to a Drosophila hedgehog protein (R77337), and is encoded by a cDN isolated by low stringency screening of a mouse genome DNA library Probes and primers derived from hedgehog sequences may be used as diagnostic agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used in gene therapy. Antibodies generated from the protein may be used as therapeutic c
                                                                                                                                                                                                                                                                                                                                                                                                                                therapy.

                                Pri Method for limiting damage to neurons caused by ischaemic or epoxic pri conditions - is used for the treatment and prevention of e.g. conditions - is used for the transient ischaemic or epoxic pri cerebral infarction, stroke and transient ischaemic attacks Disclosure; Page 65-66; 104pp; English.

CC A method has been developed for limiting the damage to neuronal cells by cischaemic or epoxic conditions by administering a ptc (patched); cc construct which recombines with the genomic hedgehog gene to provide a cc neuronal cells can also be limited by administering a gene activation construct which recombines with the genomic hedgehog gene to provide a cc erebral tissues against ischaemic linked to the coding region of this gene. Administration of the ptc therapeutic agent is used to protect correbral tissues against ischaemic injury; to treat cerebral infarct or ischaemia, stroke (thrombolic or embolic) and transient ischaemic corresponding introducing the demacy other cases of conditions may cause cerebral hypoxia, or progressive loss of neurons conditions may cause cerebral hypoxia, or progressive loss of neurons conditions may cause cerebral hypoxia, or progressive loss of neurons cured treatment reduces CIV by at least 25, particularly at least 70,%.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  멇
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
PT increasing the survival of neuronal, dopaminergic and GABA-nergic PT cells - by using a ptc therapeutic such as a protein kinase pt inhibitor, or an agent derived from hedgehog polypeptides, useful in PT inhibitor, or an agent derived from hedgehog polypeptides, useful in PT the treatment of Parkinson's disease

PS Disclosure; Page 85-86; 138p; English.

CC This polypeptide is mouse Desert hedgehog protein (Dhh). The comparison of the finding that hedgehog proteins are useful compared to neurons or the general loss of dopaminergic neurodegenerative disorders resulting from the loss of dopaminergic cand/or GABA-nergic neurons, or the general loss of tissue from the substantia nigra. Exemplary disorders include Parkinson's disease, and creat in schaemia. The invention relates to hedgehog constructs (i.e. hedgehog polypeptides and gene therapy constructs agenerated is schemia. The invention relates to hedgehog resultatory sequences) and ptc therapeutics (i.e. agents which mimic the effect of naturally occurring hedgehog proteins on patched signalling) conflatures, and to enhance the implantation of such neuronal cells in conditions arising from the use of certain drugs, and in the conditions arising from the use of certain drugs, and in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mahanthappa NK, Miao N, Pang WPI; 99-142578/12.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
A new method to regulate muscle growth

The Disclosure; Page 112-113; 130pp; English.

The present sequence is mouse Desert hedgehog protein Dhh. The

Convention relates to a method for modulating the formation and/or

cells, especially muscle stem/progenitor cells, in vitro or in

vivo, with a hedgehog therapeutic (i.e. hedgehog polypeptides and

cene therapy constructs) or ptc therapeutic (i.e. a small organic

molecule that mimics the effect of hedgehog proteins on patched

signalling, or activates or potentiates patched signalling) in an

amount effective to alter the growth state of the treated cells.

Also claimed is a method for treatment or prevention of disorders

of, or surgical or cosmetic repair of, such muscle tissues, by

administering a hedgehog polypeptide or ptc therapeutic. The

disorder may be muscle atrophy, in particular skeletal muscle

catrophy or cardiac muscle atrophy, cachexia, or muscular myopathy

call claimed). The hedgehog polypeptide or ptc therapeutic can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

The hedgehog therapeutic preferably comprises at least a bioactive extracellular portion of a hedgehog protein (see Y05510-19) encoded by a vertebrate hedgehog gene (see x25098-107), especially a human hedgehog gene.                                                                                                                                                                                                   antibody Claim 3;
This is the amino acid sequence of a precursor of a novel human Desert hedgehog proteen, as deduced from a CDNA clone (see V62394) derived from cell line ARH-77 (ATCC CRL-1621). The mature form (see W7959) of the hedgehog protein is also claimed, as are a monoclonal antibody (MAb) that recognises the protein, a process for producing the protein, and a method for detectin, a process for producing the protein, and a method for detecting the protein. The hedgehog protein is useful in establishment of hybridomas which produce antibodies recognising the protein, and the MAb is useful
                                                                                                                                                                                                                                                Human Desert hedgehog

Claim 17; Page 139-41; 210pp; English.
The sequence represents a mouse sonic hedgehog protein, homologous to a Drosophila hedgehog protein (R77337), and is encoded by a cDNA isolated from an 8.5-day post coltum mouse library. Probes and primers derived from the sonic hedgehog
                                                                                                                                                                                   Ingham PW, Mcmaho

       Method for limiting damage to neurons caused by ischaemic or epoxic conditions - is used for the treatment and prevention of e.g. cerebral infarction, stroke and transient ischaemic attacks Disclosure; Page 68-70; 104pp; English.

A method has been developed for limiting the damage to neuronal cells ischaemic or epoxic conditions by administering a ptc (patched) therapeutic agent to reduce cerebral infarct volume (CIV). Damage to neuronal cells can also be limited by administering a gene activation construct which recombines with the genomic hedgehog gene to provide a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      may be used as diagnostic agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used gene therapy. Antibodies generated from the protein may be used as therapeutic or research reagents.
                                                                                                                                                                                                                                                                                                  Mouse Shh hedgehog protein sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gene. Administration of the ptc therapeutic agent is used to protect cerebral tissues against ischaemic injury; to treat cerebral infarct or ischaemia, stroke (thrombolic or embolic) and transient ischaemic attacks. It may also be used as a prophylactic in many other cases of injury to the brain or spinal cord, oedema caused by trauma, haemorrhage and encephalomyelitis, or in conjunction with (coronary bypass) surgery. Treatment (which may be prophylactic) is used where ischaemic/epoxic conditions may cause cerebral hypoxia, or progressive loss of neurons due to oxygen depletion, including in patients with hypotension. The present sequence represents a hedgehog sequence given in the present reventer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               c and cerebral ischaemia. The invention relates to hedgehog therapeutics (i.e. hedgehog polypeptides and gene therapy constructs (e.g. constructs encoding recombinant hedgehog polypeptides and ctrans-activation constructs for altering hedgehog polypeptides and ctrans-activation constructs for altering hedgehog gene regulatory sequences) and ptc therapeutics (i.e. agents which mimic the effect of naturally occurring hedgehog proteins on patched signalling) that are effective in both human and animal subjects. Human Ihh and plypeptides (see W97763-64) are preferred. The products can also be used for the maintenance of differentiated neurons in cultures, and to enhance the implantation of such neuronal cells in an animal. They can be used to prevent or treat neurodegenerative conditions arising from the use of certain drugs, and in the provent or treat neuroprotective
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Ma

This polypeptide is mouse Shh Sonic hedgehog protein. The invention is based on the finding that hedgehog proteins are useful, as protective agents in the treatment and prophylaxis of neurodegenerative disorders resulting from the loss of dopaminergic and/or GABA-nergic neurons, or the general loss of tissue from the substantial form.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Also claimed is a method for treatment or prevention of disorders of, or surgical or cosmetic repair of, such muscle tissues, by administering a hedgehog polypeptide or ptc therapeutic. The disorder may be muscle atrophy, in particular skeletal muscle atrophy or cardiac muscle atrophy, cachexia, or muscular myopathy (all claimed). The hedgehog polypeptide or ptc therapeutic can inhibit growth of myoblastic-derived tissue to provide treatment of hyperblastic or neoplastic growth of muscle tissue such as in myoblastic sarcoma (also claimed). The hedgehog therapeutic preferably comprises at least a bloactive extracellular portion of a hedgehog protein (see Y05510-19) encoded by a vertebrate hedgehog gene (see X35098-107), especially a human hedgehog gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A new method to regulate muscle growth Disclosure; Page 115-116; 130pp; English.
The present sequence is mouse Sonic hedgehog protein Shh. Th invention relates to a method for modulating the formation an maintenance of muscle tissue by ecotopically contacting muscle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (ONTO-) ONTOGENY INC.

Scalaim 13; Pages 153-154; 210p; English.

CC This represents a mouse sonic hedgehog (shh) protein sequence. The CC Invention provides methods and compounds for modulating proliferation or differentiation of neuronal cells, cholesterol biosynthesis or transport or expression of pituitary gland genes. The method for affecting cholesterol biosynthesis or transport in a cell comprises contacting a CC cell with a compound that affects hedgehog, thereby affecting cholesterol biosynthesis or transport. The methods for inhibiting the neural inducing CC activity of a hedgehog polypeptide in cells, and for inducing pituitary gland gene expression utilises sequences selected from a zebrafish CC (shh) protein (W61486), a chicken shh protein (W61487) or a mouse shh cc (shh) protein (W61488). The products and methods provide for compounds which CC can affect hedgehog activity. They can be used for treating disorders which arise from neuronal degeneration or abnormal function. They can class be used for treating during the healing of major limb trauma. They can sloo be used for treating during the healing of major limb trauma. They can compound the content of the products can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

Claim 17; Page 133-35; 210pp; English.
The sequence represents a chicken sonic hedgehog protein, homologous to a Drosophila hedgehog protein (R77337), and is encoded by a cDNA isolated from a stage 22/22 limb bud cDNA library. Probes and priners derived from the sonic hedgehog gene may be used as diagnostic agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used 1 gene therapy. Antibodies generated from the protein may be used as therapeutic or research reagents.

PT Method for limiting damage to neurons caused by ischaemic or epoxic PT conditions - is used for the treatment and prevention of e.g. PT cerebral infarction, stroke and transient ischaemic attacks pt cerebral infarction, stroke and transient ischaemic attacks pt cerebral infarction, stroke and transient or neuronal cells by cischaemic or epoxic conditions by administering a ptc (patched) construct which recombines with the genomic hedgehog gene to provide a construct which recombines with the genomic hedgehog gene to provide a construct which recombines with the genomic hedgehog gene to provide a construct which recombines with the genomic hedgehog gene to provide a construct which resolution regulator linked to the coding region of this gene. Administration of the ptc therapeutic agent is used to protect cerebral tissues against ischaemic injury; to treat cerebral infarct or ischaemia, stroke (thrombolic or embolic) and transient ischaemic construct with the brain or spinal cord, codema caused by trauma, haemorrhage and tenephalomyelitis, or in conjunction with (coronary bypass) surgery. Treatment (which may be prophylactic) is used where ischaemic/epoxic conditions may cause cerebral hypoxia, or progressive loss of neurons due to oxygen depletion, including in patients with hypotension. therapeutic agent to reduce cerebral infarct volume (CIV). Damage to neuronal cells can also be limited by administering a gene activation construct which recombines with the genomic hedgehog gene to provide a heterologous transcription regulator linked to the coding region of this gene. Administration of the ptc therapeutic agent is used to protect cerebral tissues against ischaemic injury; to treat cerebral infarct or ischaemia, stroke (thrombolic or embolic) and transient ischaemic of attacks. It may also be used as a prophylactic in many other cases of injury to the brain or spinal cord, oedema caused by trauma, haemorrhage and encephalomyelitis, or in conjunction with (coronary bypass) surgery. Treatment (which may be prophylactic) is used where ischaemic/epoxic conditions may cause cerebral hypoxia, or progressive loss of neurons due to oxygen depletion, including in patients with hypotension. The treatment reduces CIV by at least 25, particularly at least 70,%. The present sequence represents a hedgehog sequence given in the present sequence. 411 AA;	equence. peutic; neuroprotective; repeutic; neuroprotective; ransient ischame; spinal cord; oedema; me; spinal cord; oedema; is; coronary bypass; cerelis; cerelis; coronary bypass; cerelis;	W61487 R77345 W94469 W957766 Y05511 W97764 W79595 W79595 W79597 W94477

CC as protective agents in the treatment and prophylaxis of neuronedgenerative disorders resulting from the loss of dopaminergic neurons; or the general loss of tissue from the substantia nigra. Exemplary disorders include Parkinson's disease, and cerebral ischaemia. The invention relates to hedgehog constructs encoding recombinant hedgehog polypeptides and creament and gene therapy constructs e.g. constructs encoding recombinant hedgehog polypeptides and conformable of the substantially occurring hedgehog proteins on patched signalling) constructs of naturally occurring hedgehog proteins on patched signalling) conformable comprising amino acids 28-202 of human 1hh is preferred. The products can also be used for the maintenance of differentiated neurons in cultures, and to enhance the implantation of such neuronal cells in an animal. They can be used to prevent or treat neurons constructs argent of hypoxia, e.g. as a construct or constructs and in the prevention and/or treatment of hypoxia, e.g. as a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
commaintenance of muscle tissue by ecotopically contacting muscle cells, especially muscle stem/progenitor cells, in vitro or in converse therapy constructs) or put cherapeutic (i.e. hedgehog polypeptides and gene therapy constructs) or put cherapeutic (i.e. a small organic collecule that mimics the effect of hedgehog proteins on patched comblecule that mimics the effect of hedgehog proteins on patched common effective to alter the growth state of the treated cells. Also claimed is a method for treatment or prevention of disorders of, or surgical or cosmetic repair of, such muscle tissues, by administering a hedgehog polypeptide or ptc therapeutic. The disorder may be muscle atrophy, in particular skeletal muscle atrophy or cardiac muscle atrophy, cachexia, or muscular myopathy calimed). The hedgehog polypeptide or ptc therapeutic can inhibit growth of myoblastic growth of muscle tissue such as in myoblastic sarcoma (also claimed). The hedgehog therapeutic can composite the common 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A new method to regulate muscle growth

PT Method for Inimiting damage to neurons caused by ischaemic or epoxic PT conditions - is used for the treatment and prevention of e.g. conditions - is used for the treatment and prevention of e.g. cerebral infarction, stroke and transient ischaemic attacks Disclosure; Page 66-68; 104pp; English.

CC A method has been developed for limiting the damage to neuronal cells by CI ischaemic or epoxic conditions by administering a ptc (patched) cC ischaemic or epoxic conditions by administering a ptc (patched) cC neuronal cells can also be limited by administering a gene activation construct which recombines with the genomic hedgehog gene to provide a construct which recombines with the genomic hedgehog gene to provide a cerebral tissues against ischaemic linked to the coding region of this gene. Administration of the ptc therapeutic agent is used to protect cerebral tissues against ischaemic injury; to treat cerebral infarct or ischaemia, stroke (thrombolic or embolic) and transient ischaemic cases of conditions may cause cerebral hypoxia, or prophylactic in many other cases of conditions may cause cerebral hypoxia, or progressive loss of neurons due to oxygen depletion, including in patients with hypotension. The treatment reduces CIV by at least 25, particularly at least 70,%. The present is conditions a hedgehog sequence given in the present conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Patched; hedgehog; ptc therapeutic; neuroprotective; neuronal cell brain infarction; cerebral infarction; transient ischaemic attack; stroke; cerebral infarct volume, spinal cord; oedema; trauma; haemorrhage; encephalomyelitis; coronary bypass; cerebral hypoxia.

CC This polypeptide is mouse Ihh Indian hedgehog protein. The CC invention is based on the finding that hedgehog proteins are useful CC as protective agents in the treatment and prophylaxis of neurodegenerative disorders resulting from the loss of dopaminergic CC and/or GABA-nergic neurons, or the general loss of tissue from the CC substantia nigra. Exemplary disorders include Parkinson's disease, CC Huntington's disease (both claimed), amyotrophic lateral sclerosis CC and cerebral ischaemia. The invention relates to hedgehog therapeutics (i.e. hedgehog polypeptides and gene treats activation constructs for altering hedgehog gone regulatory C sequences) and ptc therapeutics (i.e. agents which mimic the effect of naturally occurring hedgehog proteins on patched signalling)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                         04-FEB-1999.

Mouse Indian hedgehog (Inh) protein.
Indian hedgehog; Ihh protein; mouse; dopaminergic; GABA-ner ptc therapeutic; patched; signal transduction; Parkinson's Huntington's disease; amyotrophic lateral sclerosis;
Increasing the survival of neuronal, dopaminergic and GABA-nergic cells - by using a ptc therapeutic such as a protein kinase inhibitor, or an agent derived from hedgehog polypeptides, useful the treatment of Parkinson's disease
                                                                                                                                                                                                                                                                                                                        cerebral ischaemia; hypoxia; neuroprotective;

A new method to regulate muscle growth Disclosure; Page 114-115; 130pp; English.
The present sequence is mouse Indian hedgehog protein Ihh. The invention relates to a method for modulating the formation and/or maintenance of muscle tissue by ecotopically contacting muscle cells, especially muscle stem/progenitor cells, in vitro or in vivo, with a hedgehog therapeutic (i.e. hedgehog polypeptides and gene therapy constructs) or ptc therapeutic (i.e. a small organic molecule that mimics the effect of hedgehog proteins on patched signalling, or activates or potentiates patched signalling) in an amount effective to alter the growth state of the treated cells.
                                                                                                                                                                                                                                                                                                    05-JUL-1999 (first entry)

                                                                                                                                                                                                                                                               04-MAR-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             that are effective in both human and animal subjects. Human Ihh and by preptides (see W97763-64) are preferred. The products can also be used for the maintenance of differentiated neurons in cultures, and to enhance the implantation of such neuronal cells in an animal. They can be used to prevent or treat neurodegenerative conditions arising from the use of certain drugs, and in the prevention and/or treatment of hypoxia, e.g. as a neuroprotective
                                                                                                                                                                                                                                                                                                                                                                                           105512 standard; Protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          agent.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Also claimed is a method for treatment or prevention of disorders of, or surgical or cosmetic repair of, such muscle tissues, by administering a hedgehog polypeptide or ptc therapeutic. The disorder may be muscle atrophy, in particular skeletal muscle atrophy or cardiac muscle atrophy, cachexia, or muscular myopathy (all claimed). The hedgehog polypeptide or ptc therapeutic can inhibit growth of myoblastic-derived tissue to provide treatment of hyperblastic or neoplastic growth of muscle tissue such as in myoblastic sarcoma (also claimed). The hedgehog therapeutic preferably comprises at least a bioactive extracellular portion of a hedgehog protein (see Y05510-19) encoded by a vertebrate hedgehog gene (see X25098-107), especially a human hedgehog gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      gene (see

Claim 17; Page 146-47; 210pp; English.

The sequence represents a mouse Indian hedgehog protein, homologous to a Drosophila hedgehog protein (R77337), and is encoded by a cDNA isolated by screening of a human fetal lung 5'-stretch plus cDNA library. Probes and primers derived from hedgehog sequences may be used as diagnostic agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used in gene antibodies generated from the protein may be used as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  isolated by low stringency screening of a mouse genome DNA library and screening of an 8.5 day post coitum cDNA library. Probes and primers derived from hedgehog sequences may be used as diagnostic agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used in gene therapy. Antibodies generated from the protein may be used as therapeutic or research reagents.
                                                                                                                                                                 Hedgehog-like protein(s) and nucleic acid(s) encoding them to treat degenerative nervous system disorder(s) and in gene
                                                                                                                                                                                                                                                                                                                                           Homo sapiens.

CC differentian provides methods and compounds for modulating proliferation or compounds for modulating proliferation or compound that compounds for modulating proliferation or compression of pituitary gland genes. The method for affecting cholesterol biosynthesis or transport in a cell comprises contacting a ccell with a compound that affects hedgehog, thereby affecting cholesterol biosynthesis or transport. The methods for inhibiting the neural inducing activity of a hedgehog polypeptide in cells, and for inducing pituitary claim gene expression utilises sequences selected from a zebrafish ctiggy-winkle hedgehog (twhh) protein (W61485), a zebrafish sonic hedgehog (shi) protein (W61486), a chicken shh protein (W61487) or a mouse shh compound the products and methods provide for compounds which can affect hedgehog activity. They can be used for treating disorders which arise from neuronal degeneration or abnormal function. They can also be used for treating smith-Lemil-Optiz syndrome. The products can so be used for treating smith-Lemil-Optiz syndrome. The products can so be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

The sequence represents a mouse sonic hedgehog protein, homologous to a Drosophila hedgehog protein (R77337), and is encoded by a cDNA isolated from an 8.5-day post coitum mouse library. Probes and primers derived from the sonic hedgehog may be used as diagnostic agents for neuromuscular, autonomic
